設計理念：

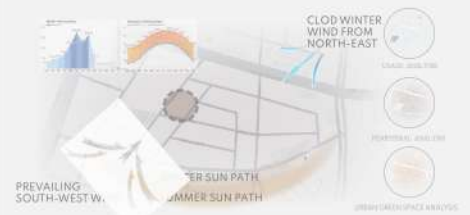

從大門穿行入內，以大面積的客、餐、廚公共領域，瀟灑著溫潤與俐落並濟的大器風範，以「分享」為主軸，將空間重心定錨於餐廳與廚房，和煦色溫，輕盈地漫射每處角落，內斂地襯出全室充滿溫度的風格美學，也讓講究細節處的紋理與質地，走出空間場域的底蘊。中島廚房，開闊地讓所有對話、聚合與交流，都通過生活食癒注入情感。訴說出廚具與家電融入生活美學的機能美感，藉由世紀傳承的工藝，從紋理、功能、廓型到質地，為當代廚房開啟不同凡響的型態之美。從廚房走出改變場域的催化劑，將廚房的格局，從單純烹飪，延伸到生活的溫度 不管是材質上的溫潤、還是透過工匠賦予不同紋理表情的手感溫度 由餐廚空間搭起的主舞台，橫貫著有氣勢的中島焦點。以天然石材、霧面黑色金屬及實木，產生迷人的層次紋理，匯合出質感生活的柔性律動。

SITE ANALYSIS

SPACE BUBBLE

CONCEPT

In the overall layout, the interior side view of the building is also cleverly presented. Aesthetics, out of the kitchen as a catalyst to change the field, extending the layout of the kitchen ranges from simple cooking to the temperature of life.

HOME AUTOMATION SYSTEMS

Home automation systems can control lights, windows, temperature and humidity, audio-visual equipment, and home appliances. Smart homes may also include home security, such as access control or alarms. When connected to the Internet, home devices become an important component of the intelligent network.

SMART SENSORS

Smart sensors are like home security. They can detect changes in the environment at any time to change the status of home appliances or equipment in the home. Smart sensors will actively save your energy and then connect to other devices to respond.

PHOTOCHROMIC GLASS

The color-changing glass can automatically control the solar radiation entering the room, improve the natural lighting in the room, and thus regulate the indoor temperature. Because of the installation of the color-changing glass, the outside can be seen from the outside, but the inside cannot be seen from the outside, which has a high degree of privacy.

ARTIFICIAL INTELLIGENCE SECRETARY

The principle comes from the user authorizing personal information such as geographic location, contact person, calendar, email, IP, message, home company address, etc. in the mobile phone to him, searching for connections between the messages and creating a knowledge graph, integrating the information in the mobile phone to provide AI service.
